Jago Sound

Make a little noise. Or a whole song.

Compose editable music, invent sound effects and build ambience offline. Begin from a score, an example, a seeded idea or an empty composition and shape it yourself.

Your first few minutes

1. Create a blank song or choose an example, score or generation approach.
2. Generate or compare alternatives, then edit notes, sections and parts.
3. Use Mix parts and hear the melody/details together; shape performance if useful.
4. Save .jagomusic; export WAV for the sound or MIDI for the note arrangement.

Version 0.10.0 | Windows and offline browser edition

What you can do

Jago Sound 0.10.0

- Editable parts, note patterns, song sections, instruments and a visible mixer.
- Seeded complete-song approaches, feelings, arrangements, locks and alternatives.
- MIDI score import with supported full-score or passage choices.
- Sound Workshop combines editable tones, noise, impacts and recordings.
- Separate working-track and sound-recipe folders; native project backups.

A useful way to work

World / Library: supported WAV transfers can carry the editable original.

Keep your editable project alongside finished exports. A rendered image, audio file or video preserves the result; the native project preserves the editing controls.

In this update

New tools and refinements

- Ensemble-led generation adds an answering approach to the existing families.
- Natural phrasing, stronger accents and performance shaping vary note strength/articulation.
- Mix parts shows level, pan, mute/solo together; shape notes previews edits with Undo.
- Invent from ingredients adds mechanisms, clusters, pulses and evolving loops.
- Check loop join plays two consecutive copies; stereo transfers retain both channels.
- Give the melody room coordinates generated details; existing songs have an explicit undoable coordination action.

Keep exploring

Use the editable examples and in-app help to try another direction. Save a copy before experimenting with an important project.

The controls described here are included in this version. Optional local tools are identified in the practical details; they do not run continuously.

Save, share & connect

Files you can keep

- .jagomusic compositions
- Stereo WAV mixes, effects and supported stem/export kits
- MIDI arrangements
- .jagosound recipes and WAV + recipe ZIPs

Connected workflows

- World / Library: supported WAV transfers can carry the editable original.
- Pulse: import an exported WAV for analysis and music-led visuals; this is a file workflow.
- Library: send supported MIDI into Sound and organise audio assets.

Practical details

Compact compositions are bounded to three minutes; custom recipes use up to eight ingredients and 30 seconds.

MIDI does not preserve Jago synthesis, every controller automation or arbitrary tempo changes.

Loop inspection helps you judge a join; it does not guarantee every recipe is seamless.

Review bundled score licences and the rights of imported audio.

Opening: Extract the complete ZIP and open Jago-Sound.exe, or Jago-Sound.html in a current Edge/Chrome browser. Keep support folders together.
